Create a project called Daily5. Add a C source file to the project named daily5.c. Write a program that prints the following on the screen:

Do this by writing your own function called smile that accepts no parameters and returns nothing. Your main program should call the smile function three times, printing new lines in between each call, to produce the above output.

Turn in your C source file, daily5.c, on Blackboard. Let me know if you have any questions.
